

1 **Abstract of Disclosure**

2 A heat sink includes a strip, two flanges extending from a side of the strip,
3 at least one slot defined in the strip near each of the flanges, at least one
4 tongue projecting from an internal side of each of the flanges and at least
5 one lug projecting an edge of each of the flanges and defining an aperture.
6 The lugs can be inserted through the slots of another heat sink so that the
7 apertures thereof can receive the tongues of the other heat sink.
